

BOROKINI COUTURE DIGITAL PRESENCE & BRAND DEVELOPMENT

Portfolio Case Study | Marketing & Digital Operations

1. Executive Summary

- Over a four-month period, I supported Borokini Couture, a bespoke fashion business, with the development of its digital presence, brand direction, social media channels and customer-order management process. The project focused on establishing practical digital infrastructure and creating a more consistent, professional presentation of the brand online.
- My work included website development, TikTok support, Pinterest setup and content activity, branding strategy, business-account setup and the creation of an Excel-based customer-order template. The project was designed to give the business a stronger foundation for digital visibility while also introducing a more structured approach to customer information management.

2. Business Problem / Context

- Borokini Couture operated primarily through offline customer acquisition, with many customers coming through walk-ins and referrals. The business had an opportunity to strengthen its digital presence, improve the way its work was presented online, and create a more structured process for recording customer orders.
- The key challenge was therefore not simply to create social-media accounts, but to build a practical digital foundation that could support brand visibility, customer discovery and future data-driven decision-making.

3. Project Objectives

- Establish a stronger and more professional digital presence for the business.
- Create and improve digital channels through which potential customers could discover the brand.
- Develop a clearer and more consistent branding and content direction.
- Improve the presentation of garments through social-media content.
- Introduce a structured customer-order template that could support future reporting and analysis.

4. My Role

Marketing & Digital Operations Support

- responsible for supporting the business's digital setup
- online presence
- content direction and
- basic customer-data organization.

5. Strategy

- The approach combined brand development, digital channel creation and process improvement. Rather than treating each platform as a separate activity, the goal was to create a connected digital presence in which the brand could consistently showcase its work and make it easier for potential customers to discover the business.

6. Implementation & Deliverables

Area	What I did	Purpose
Website	Created a website for Borokini Couture.	Established a central online presence and a place to showcase the business.
TikTok	Supported the setup and management of the brand's TikTok presence and content.	Increase visibility and improve the way garments are presented.
Pinterest	Created the Pinterest account and supported content publishing.	Build visual discoverability and reach potential customers through search and discovery.
Branding Strategy	Developed branding and content-direction recommendations.	Create a clearer and more consistent brand identity and presentation.
Business Account	Helped establish the business account.	Provide a more structured foundation for business operations.
Customer Orders	Created an Excel-based customer-order template.	Structure customer/order information and create a foundation for future analysis.

7. Results & Evidence

- The project produced tangible digital and operational deliverables, including a website, active social-media channels, a branding direction and a structured customer-order template.
- Pinterest reached approximately 16,000 views during a period of active content publishing.
- The business continues to implement elements of the branding and content recommendations.
- The presentation of the business's video content has improved, including stronger visual showcasing of garments.
- A customer-order tracking structure was introduced to help organize customer and order information.
- The business established a broader digital footprint across website, TikTok and Pinterest.
- Note: The Pinterest figure represents platform views during the period of active publishing. It is not presented as evidence of direct revenue or customer acquisition because no reliable attribution data was available.

8. Customer Data & Process Improvement

- A structured Excel template was created to record customer orders. The intention was to move customer-order information into a consistent format that could eventually be used for reporting and analysis.
- Potential fields included:
 - Order/customer information
 - Garment or product details
 - Order amount
 - Deposit and outstanding balance
 - Order status
 - Delivery information
- At the time of the project, the business had not accumulated enough orders in the new system to support a meaningful customer or sales analysis.

9. Limitations

- The main limitation was data availability. Borokini Couture's customers were primarily acquired through walk-ins and referrals, and the project period coincided with relatively low order volume. Only a small number of customer orders were available for review, which was not sufficient to produce reliable conclusions about customer behavior, purchasing patterns, product demand or revenue trends.
- For this reason, I did not force an analytics component into the project or make unsupported claims about customer acquisition, sales growth or revenue impact. Instead, I focused on establishing the digital and data infrastructure that would make meaningful analysis possible once sufficient information had been collected.

10. What I Would Measure With Sufficient Data

- Order volume over time
- High-demand garment categories
- Average order value
- New versus returning customers
- Customer purchase frequency
- Referral and acquisition sources
- Peak ordering periods
- Revenue and order trends

11. Next Phase

- Once sufficient order data has accumulated, the dataset can be analyzed to identify purchasing patterns, high-demand garment categories, customer behavior, and opportunities for digital customer acquisition.
- This future analysis will be treated as a separate analytics project rather than being presented as part of this initial digital-transformation case study. This separation ensures that conclusions are based on an adequate dataset and clearly distinguishes implementation work from subsequent data analysis.

12. Key Learning

- This project demonstrated the importance of building the right foundation before attempting to draw insights from data. It also provided practical experience in combining marketing strategy, digital channel development, content operations and basic data organization within a real small-business environment.

13. Portfolio Takeaway

- This case study demonstrates my ability to identify a small-business challenge, translate it into practical marketing and digital initiatives, implement those initiatives across multiple channels, create a structured process for future data collection, and recognize when available data is not sufficient to support reliable analysis.

14. Evidence

Selected evidence showing digital channel development, content strategy, social proof and product presentation.

01

Pinterest growth & setup

Before/after account snapshots and performance evidence.

02

Content campaign

OOTW content used to showcase the type of fashion content relevant to the intended audience.

03

Customer social proof

Example review creative developed for the brand.

04

Product presentation

Cleaner, product-focused garment visuals with standardized backgrounds.

14.1 Pinterest — Before & After

Evidence of setting up the visual discovery channel and building out the content presence.

Before — initial setup

First-day snapshot showing the account with its initial published content.

After — developed content presence

Expanded visual catalogue with multiple garment and customer-content pins.

14.2 Pinterest — Performance Evidence

A platform-level snapshot showing reach, engagement and top-performing pins.

Analytics snapshot

17k impressions, 63 engagements, 62 engaged audience and 2 saves for 20 Aug–19 Sep 2026.

Top pins

Top content included "Regal Ankara" (590 impressions), "Style meets comfort" (494) and "Denim on fleak" (200).

14.3 Content Campaign & Social Proof

Examples of content created to support audience positioning and strengthen the brand presentation.

OOTW campaign

An outfit-of-the-week content series ran during the volunteering period to demonstrate fashion content themes aligned with the intended customer audience

Evidence from project deliverables and platform screenshots

Review creative

A branded customer-review asset designed to turn positive feedback into reusable social proof

14.4 Product Presentation

Examples of cleaner, standardized garment imagery designed to keep attention on the product.

Visual presentation improvement

Garment images were presented against cleaner, more consistent backgrounds so the clothing becomes the primary visual focus rather than the surrounding environment.

14.5 Evidence Takeaway

What these examples demonstrate about my contribution to the project.

Digital execution

Built and developed a Pinterest presence, supported content publishing and used platform analytics to review performance.

Content & brand presentation

Created audience-focused content, review assets and cleaner product visuals to strengthen how the business appeared online.

Marketing thinking

Connected content activity to the intended customer segment while keeping claims grounded in the evidence available.
